

- A. I believe that the system is inadequate, as there is currently limited regulation related to short term rentals and lack of transparency surrounding the regulatory process of short term rentals. The SFPO should put more resources into its enforcement and oversight efforts and collaborate with other agencies to improve their oversight of short term rentals.
- B. One additional stakeholder that is impacted would be the neighborhood that the airbnb rental is listed in. This group can advocate for policy changes and participate in monitoring and reporting infractions themselves to improve the accountability and regulation of airbnb listing in the city
- C. One factor that is important to consider would if it is ethical to web scrape, this is important because you could be scraping for nefarious reasons, and we should the right to privacy
- D. Two guidelines to think about when considering web scraping would be: is this ethical and why am I web scraping (purpose). The ethical part should be enforced by making an ethical framework for web scrapers to follow. Which would be enforced by the web scrapers. Purpose should be enforced by making the web scraper be transparent with their intentions with web scraping. This would be enforced by the website owners or even regulatory bodies.
